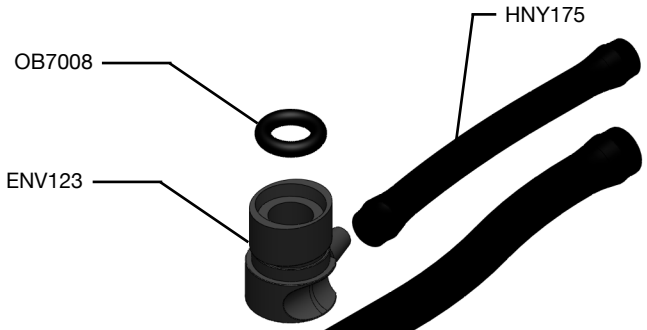
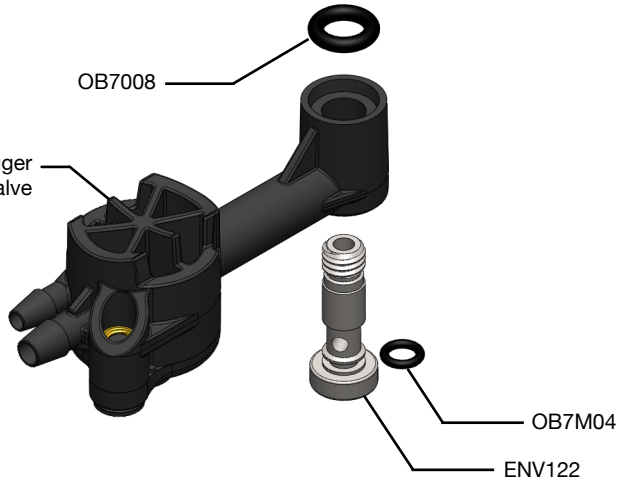
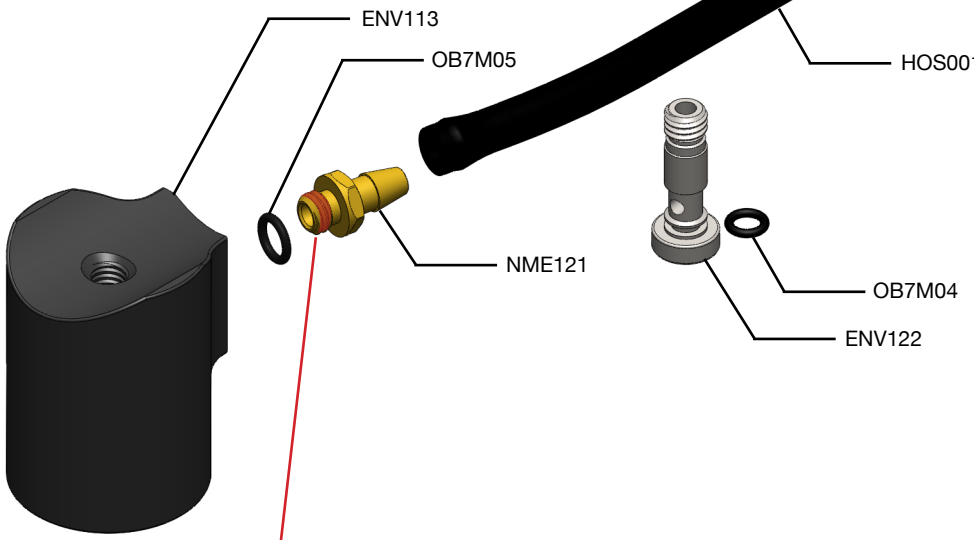
The nMK2 Trigger Valve may be identified by its lower profile, downward facing screw heads (when mounted in the eNMEy) and metal pressure plate. Correct valve identification is critical to trigger actuator selection (see page 8).







Sealed to ASA with thread-locking compound

NOTE: Pneumatics hoses are single-use parts. Once removed from a barbed fitting, they will have been stretched to the point that they can no longer provide a reliable seal.

IMPORTANT: The nMK2 Actuator Pin must only be used with the nMK2 Trigger Valve (see page 4) or valve damage will result. An nMK1 Actuator Pin will not work with an nMK2 Trigger Valve. The nMK2 Actuator Pin may be identified by the X-shaped “wings” in its middle.
